

Management's Discussion and Analysis

This Management's Discussion and Analysis ("MD&A") contains forward-looking statements. These statements are based on certain estimates and assumptions and involve risks and uncertainties. Actual results may differ materially. See the Forward-Looking Statements section of this MD&A for additional information.

This MD&A should be read in conjunction with the unaudited interim condensed consolidated financial statements of TransAlta Renewables Inc. as at and for the three and six months ended June 30, 2017 and 2016 and should also be read in conjunction with the annual audited consolidated financial statements and MD&A contained within our Annual Report for the year ended Dec. 31, 2016. In this MD&A, unless the context otherwise requires, 'we', 'our', 'us', 'TransAlta Renewables', and the 'Corporation' refer to TransAlta Renewables Inc. and its subsidiaries and 'TransAlta' refers to TransAlta Corporation and its subsidiaries. Capitalized terms not otherwise defined herein have their respective meanings set forth in the Glossary of Key Terms. All dollar amounts in the tables presented in this MD&A are in millions of Canadian dollars except per share amounts which are presented in whole dollars to the nearest two decimals, unless otherwise noted. The interim condensed consolidated financial statements have been prepared in accordance with International Financial Reporting Standard ("IFRS") International Accounting Standards ("IAS") 34 *Interim Financial Reporting*. This MD&A is dated Aug. 8, 2017. Additional information respecting the Corporation, including its Annual Information Form, is available on SEDAR at www.sedar.com and on our website at www.transaltarenewables.com. Information on or connected to our website is not incorporated by reference herein.

Operations of the Corporation

As at June 30, 2017, TransAlta Renewables owned 13 hydro facilities, 17 wind farms, and one gas plant, and held economic interests in the cash flows from the Wyoming Wind Farm and Australian Assets.

In total, we own, directly or through economic interests, an aggregate of 2,291 MW of net generating Capacity⁽¹⁾ in operation. TransAlta manages and operates these facilities on our behalf under the terms of a Management, Administrative and Operational Services Agreement.

We have an economic interest in the cash flows from, and not direct ownership of, the Wyoming Wind Farm and the Australian Assets. The operational results of these assets are not consolidated into our reported results; however, the finance income we receive on the underlying investments is included in our consolidated net earnings.

Non-IFRS Measures

We evaluate our performance using a variety of measures. Certain of the measures discussed in this MD&A are not defined under IFRS and, therefore, should not be considered in isolation or as an alternative to or to be more meaningful than measures as determined in accordance with IFRS, when assessing our financial performance or liquidity. These measures may not be comparable to similar measures presented by other issuers and should not be considered in isolation or as a substitute for measures prepared in accordance with IFRS.

The Corporation's key non-IFRS measures are Reported Earnings before Interest, Taxes, Depreciation, and Amortization ("Reported EBITDA"), Comparable Earnings before Interest, Taxes, Depreciation, and Amortization ("Comparable EBITDA"), Adjusted Funds from Operations ("AFFO") and Cash Available for Distribution ("CAFD"). Comparable EBITDA is comprised of our Reported EBITDA adjusted to include Comparable EBITDA of the facilities in which we hold an economic interest in cash flows, which is their Reported EBITDA adjusted for: 1) finance lease income and the change in the finance lease receivable amount; and 2) contractually fixed management costs. Reported EBITDA and Comparable EBITDA are presented to provide

(1) We measure Capacity as Net Maximum Capacity which is consistent with industry standards. Capacity figures represent Capacity owned and in operation unless otherwise stated. The gross capacity reflects the basis of consolidation of underlying assets owned, plus those in which we hold an economic interest. Net capacity deducts Capacity attributable to non-controlling interest in these assets.

management and investors with a proxy for the amount of cash generated from operating activities before net interest expense, non-controlling interest, income taxes, and the impacts of timing on the finance income from subsidiaries of TransAlta in which we have an economic interest. We present Comparable EBITDA along with operational information of the assets in which we own an economic interest in the cash flows so that readers can better understand and evaluate the drivers of those assets. Since the economic interests are designed to provide the Corporation with returns as if we owned the assets themselves, presenting the operational information and Comparable EBITDA provides a more complete picture for readers to understand the underlying nature of the investments and the resultant cash flows that would otherwise only be presented as finance income from the investments. AFFO is calculated as the cash flow from operating activities before changes in working capital, less sustaining capital expenditures, distributions paid to subsidiaries' non-controlling interest and finance income, plus AFFO of the assets owned through economic interests, which is calculated as Comparable EBITDA from the economic interests less the change in long-term receivable, sustaining capital expenditures, and current income tax expense. AFFO provides users with a proxy for the amount from operating activities and investments in subsidiaries of TransAlta in which we have an economic interest. CAFD is calculated as AFFO less scheduled principal repayments of amortizing debt. CAFD can be used as a proxy for the cash that will be available to common shareholders of the Corporation. One of the primary objectives of the Corporation is to provide reliable and stable cash flows, and presenting AFFO and CAFD assists readers in assessing our cash flows in comparison to prior periods.

See the Reconciliation of Non-IFRS Measures section of this MD&A for additional information.

Additional IFRS Measures

An Additional IFRS measure is a line item, heading, or subtotal that is relevant to an understanding of the financial statements but is not a minimum line item mandated under IFRS, or the presentation of a financial measure that is relevant to an understanding of the financial statements, but is not presented elsewhere in the financial statements. We have included line items entitled "gross margin" and "operating income" in our Condensed Consolidated Statements of Earnings (Loss). Presenting these line items provides management and investors with a measure of ongoing operating performance that is readily comparable from period to period.

Forward-Looking Statements

This MD&A and other reports and filings made with securities regulatory authorities include forward-looking statements. All forward-looking statements are based on our beliefs as well as assumptions based on information available at the time the assumptions were made and on management's experience and perception of historical trends, current conditions, and expected future developments, as well as other factors deemed appropriate in the circumstances. Forward-looking statements are not facts, but only predictions and generally can be identified by the use of statements that include phrases such as "may", "will", "believe", "expect", "anticipate", "intend", "plan", "foresee", "potential", "enable", "continue", or other comparable terminology. These statements are not guarantees of our future performance and are subject to risks, uncertainties, and other important factors that could cause our actual performance to be materially different from that projected.

In particular, this MD&A contains forward-looking statements pertaining to our business and anticipated financial performance including, but not limited to: spending on growth and sustaining capital and productivity projects, including sustaining capital expenditures of subsidiaries of TransAlta in which we have an economic interest; our 2017 outlook, including Reported EBITDA, Comparable EBITDA, AFFO, CAFD; renewable energy production from our wind and hydro assets in 2017; our practice of purchasing gas coincident with production; our foreign exchange risk strategy; expectations regarding net interest and volume of debt; our ability to maintain adequate availability; expectations regarding refinancing through project level debt; our expectation of raising between \$325 million and \$425 million in project level financing over the next twelve months and the use of proceeds thereof; statutory blended tax rates and cash tax horizon; expectations in terms of the cost of operations, capital spending, and maintenance, including maintenance performed by third parties, and including the variability of those costs; the payment of future dividends; expectations in respect of generation availability, Capacity, and production; the timing and completion of projects under development, including the Kent Hills 3 Wind Project and the costs thereof and the funding of such costs; expected governmental regulatory regimes, legislation and programs, including the procurement process for renewable generation in Alberta and the expected impact on us, as well as the cost of complying

with resulting regulations and laws; the value of offsets generated by our wind facilities; expectations regarding the implementation of new IFRS standards; expectations regarding seasonality of wind and hydro production; expectations for the ability to access capital markets on reasonable terms; the section titled "2017 Outlook", including our key financial targets for 2017, blended tax rate, timing for funding remaining South Hedland costs, and, the estimated or potential impact of changes in interest rates and expense and changes in the value of the Canadian dollar relative to the US dollar and the Australian dollar; the monitoring of our exposure to liquidity risk; expectations regarding entering into additional financial instruments; and expectations regarding borrowing rates and our credit practices.

Factors that may adversely impact our forward-looking statements include, but are not limited to, risks relating to: changes in general economic conditions, including interest rates; operational risks involving our facilities, including Unplanned Outages at such facilities; disputes with counterparties; risks pertaining to the timing and cost of the construction and commissioning of the Kent Hills Wind Project; disruptions in the transmission and distribution of electricity; the effects of weather; disruptions in the source of water, wind, or gas required to operate our facilities; natural disasters; the threat of domestic terrorism, cyberattacks, and other man-made disasters; equipment failure and our ability to carry out repairs in a cost-effective or timely manner; industry risk and competition; fluctuations in the value of foreign currencies; the need for additional financing and the ability to access financing at a reasonable cost; structural subordination of securities; counterparty credit risk; insurance coverage; our provision for income taxes; legal and contractual proceedings involving the Corporation; reliance on key personnel; the regulatory and political environments in the jurisdictions in which we operate; increasingly stringent environmental requirements and changes in, or liabilities under, these requirements; and the risks associated with development projects and acquisitions. The foregoing risk factors, among others, are described in further detail in the Risk Factors section of our Annual Information Form and our annual MD&A for the year ended Dec. 31, 2016. All documents are available on SEDAR at www.sedar.com.

Readers are urged to consider these factors carefully in evaluating the forward-looking statements and are cautioned not to place undue reliance on these forward-looking statements. The forward-looking statements included in this document are made only as of the date hereof and we do not undertake to publicly update these forward-looking statements to reflect new information, future events, or otherwise, except as required by applicable laws. In light of these risks, uncertainties, and assumptions, the forward-looking events might occur to a different extent or at a different time than we have described, or might not occur. We cannot assure that projected results or events will be achieved.

Highlights

Consolidated Financial Highlights

	3 months ended June 30		6 months ended June 30	
	2017	2016	2017	2016
Renewable energy production (GWh) ⁽¹⁾	886	804	1,896	1,885
Revenues	112	52	241	120
Net earnings (loss) attributable to common shareholders	22	(15)	49	(51)
Reported EBITDA ⁽²⁾	70	23	154	21
Comparable EBITDA ⁽²⁾	98	89	209	203
Adjusted funds from operations ⁽²⁾	64	55	147	137
Cash flow from operating activities	73	70	173	151
Cash available for distribution ⁽²⁾	43	38	126	120
Net earnings (loss) per share attributable to common shareholders, basic and diluted	0.10	(0.07)	0.22	(0.23)
Adjusted funds from operations per share ⁽²⁾	0.29	0.25	0.66	0.61
Cash available for distribution per share ⁽²⁾	0.19	0.17	0.56	0.54
Dividends declared per common share	0.15	0.22	0.37	0.44
Dividends paid per common share	0.22	0.22	0.44	0.44
As at	June 30, 2017	Dec. 31, 2016		
Gas installed capacity (MW) ⁽³⁾	931	931		
Renewables installed capacity (MW)	1,388	1,388		
Total assets	3,866	3,841		
Long-term debt ⁽⁴⁾	791	827		
Total long-term liabilities	1,036	1,237		

Comparable EBITDA for the quarter totalled \$98 million, a \$9 million increase over last year, driven by strong generation from our wind portfolio and unrealized mark-to-market and realized hedging gains on gas supply from our Sarnia cogeneration facility. For the year-to-date, Comparable EBITDA totalled \$209 million compared to \$203 million for the comparative period, up \$6 million, mainly due to increased Comparable EBITDA from our Canadian Wind portfolio.

Our AFFO for the three and six months ended June 30, 2017 increased \$9 million and \$10 million, respectively. CAFD also increased \$5 million and \$6 million for the three and six months ended June 30, 2017, respectively. The increase in AFFO and CAFD is attributable to the increase in Comparable EBITDA and lower current income taxes.

Reported net earnings attributable to common shareholders increased \$37 million and \$100 million for the three and six months ended June 30, 2017, respectively. For the three months ended June 30, 2017, the fair value change on the Class B shares liability contributed an increase of \$22 million to net earnings and all of our operating segments contributed better results. Year-to-date, higher foreign exchange gains of \$63 million due to the strengthening of the Australian dollar and the fair value change in the Class B shares liability of \$42 million contributed to the increase in net earnings. These increases were partially offset by higher depreciation in both periods of 2017, of \$10 million and \$20 million, respectively, due to our direct ownership of the Canadian Assets.

(1) Includes production from the Wyoming Wind Farm and excludes Canadian and Australian gas-fired generation. Production is not a key revenue driver for gas-fired facilities as most of their revenues are Capacity based.

(2) Refer to the Non-IFRS Measures section of this MD&A for further discussion of these items.

(3) Includes Australian gas-fired generation.

(4) Including current portion.

Significant and Subsequent Events

South Hedland Facility and Conversion of Class B Shares

During, and subsequent to, the quarter, the final stages of construction and commissioning of our South Hedland Facility, were completed. The facility achieved commercial operation on July 28, 2017. On Aug. 1, 2017, we converted the 26.1 million of Class B shares into 26.4 million common shares. The Class B shares were converted at a ratio greater than 1:1 because the construction and commissioning costs for the project were below the referenced costs agreed upon in the amended contribution agreement, as filed on SEDAR, between us and TransAlta. As a result of commissioning of the facility, the dividend was increased by approximately 7 per cent from \$0.88 per share to \$0.94 per share annually. On July 28, 2017, the Board of Directors declared a dividend of \$0.07833 per common share payable on Sept. 29, 2017, Oct. 31, 2017, and Nov. 30, 2017.

On Aug. 1, 2017, Fortescue Metals Group Ltd. ("FMG") notified TransAlta that in its view the South Hedland Facility has not yet satisfied the requisite performance criteria under the South Hedland power purchase agreement (the "PPA") between FMG and TransAlta. In our view, all conditions to establish commercial operations have been fully satisfied under the terms of the PPA with FMG.

Kent Hills 3 Wind Project

During the second quarter, we entered into a long-term contract with the New Brunswick Power Corporation for the sale of all power generated by an additional 17 MW of capacity from the Kent Hills wind project.

This is an expansion project of our existing Kent Hills wind farms on approximately five to ten acres of Crown Land, increasing the total operating capacity of the Kent Hills wind farms to approximately 167 MW. As part of the regulatory process, we are submitting an Environmental Impact Assessment to the Province of New Brunswick in the third quarter of 2017. If environmental approvals are received, we expect to begin the construction phase in the spring of 2018.

At the same time, the term of the Kent Hills 1 contract with NB Power was extended from 2033 to 2035.

Syndicated Credit Facility

On July 24, 2017, we entered into a syndicated credit agreement giving us access to a \$500 million committed credit facility. The agreement is fully committed for four years, expiring in 2021. The facility is subject to a number of customary covenants and restrictions in order to maintain access to the funding commitments. In conjunction with the new credit agreement, the existing \$350 million credit facility currently provided by TransAlta was cancelled.

Termination of Solomon PPA Contract

On Aug. 1, 2017, we received notice that FMG intends to repurchase the Solomon Power Station from TEC Pipe Pty Ltd., a wholly-owned subsidiary of TransAlta, for approximately US\$335 million. We have an economic interest in the cash flows generated from the Solomon Power Station. FMG is expected to complete its acquisition of the Solomon Power Station in November 2017. We will utilize the proceeds in part to repay the credit facility used to fund the development of the South Hedland Facility, for other growth opportunities, and for general corporate purposes.

Reconciliation of Non-IFRS Measures

Presenting AFFO provides users with a proxy for the amount of cash generated from operating activities of our business and from investments in subsidiaries of TransAlta in which we have an economic interest, before changes in working capital. CAFD provides users with a proxy for the cash that will be available to common shareholders of the Corporation. One of the primary objectives of the Corporation is to provide reliable and stable cash flows, and presenting AFFO and CAFD assists readers in assessing our cash flows in comparison to prior periods. See the Non-IFRS Measures section of this MD&A for additional information. AFFO per share and CAFD per share are calculated using the weighted average number of common shares outstanding during the period.

The table below reconciles our cash flow from operating activities to our AFFO and CAFD:

	3 months ended June 30		6 months ended June 30	
	2017	2016	2017	2016
Cash flow from operating activities	73	70	173	151
Change in non-cash operating working capital balances	2	(23)	(11)	(19)
Adjusted cash flow from operations before changes in working capital	75	47	162	132
Adjustments:				
Sustaining capital expenditures	(9)	(3)	(14)	(4)
Distributions paid to subsidiaries' non-controlling interest	(2)	(1)	(3)	(3)
Finance Income	(24)	(27)	(47)	(73)
AFFO - economic interests ⁽¹⁾	24	39	49	85
AFFO	64	55	147	137
Deduct:				
Principal repayments of amortizing debt	(21)	(17)	(21)	(17)
Comparable CAFD	43	38	126	120
Weighted average number of common shares outstanding in the period (millions)	224	224	224	223
AFFO per share	0.29	0.25	0.66	0.61
Comparable CAFD per share	0.19	0.17	0.56	0.54

Presenting Comparable EBITDA provides management and investors with a proxy for the amount of cash generated from operating activities before net interest expense, non-controlling interest, income taxes and the impacts of timing on the finance income from subsidiaries of TransAlta in which we have an economic interest. We present Comparable EBITDA along with operational information of the assets in which we own an economic interest so that readers can better understand and evaluate the drivers of those assets in which we have an economic interest. See the Non-IFRS Measures section of this MD&A for additional information.

The tables below reconcile our Reported EBITDA to Comparable EBITDA:

3 months ended June 30, 2017

	Reported	Adjustments	Economic interests	Comparable total
Revenues ⁽²⁾	112	-	47	159
Royalties and other costs of sales	26	-	4	30

Discussion of Comparable EBITDA

The amounts provided for in this section include operational metrics and financial information related to our fuel types which include investments in the economic interests in the cash flows from certain TransAlta subsidiaries. Since the investments in these economic interests provide us with returns as if we owned the assets, presenting the operational information provides users with more information to be able to assess the performance of the assets that generate the finance income related to the economic interests. All the assets in the U.S. Wind and Australian Gas discussions are owned through an investment in an economic interest. The Canadian Wind comparative period includes the results of the Le Nordais wind farm, the Canadian Hydro comparative period includes the results of the Ragged Chute hydro facility, and the Canadian Gas comparative period includes the results of the Sarnia cogeneration plant for Jan. 6 through June 30, 2016. We own these assets in 2017, but for the comparative period, we held our interest in such assets as an investment in an economic interest. The Comparable EBITDA of the assets in which we have an economic interest in the cash flows is reconciled to the finance income recognized in our interim condensed consolidated financial statements in the Reconciliation of Non-IFRS Measures section of this MD&A. The following table summarizes operational data and Comparable EBITDA by fuel type:

3 months ended June 30	Long-term average renewable energy production (GWh) ⁽¹⁾	Production (GWh)		Comparable EBITDA	
		2017	2016	2017	2016
Canadian Wind	625	640	564	36	33
Canadian Hydro	161	171	176	8	8
U.S. Wind	81	75	64	2	2
Total - Renewable energy	867	886	804	46	43
Canadian Gas		283	329	24	19
Australian Gas		472	371	32	31
Corporate		-	-	(4)	(4)
Total		1,641	1,504	98	89

6 months ended June 30	Long-term average renewable energy production (GWh) ⁽¹⁾	Production (GWh)		Comparable EBITDA	
		2017	2016	2017	2016
Canadian Wind	1,473	1,484	1,467	95	89
Canadian Hydro	205	215	234	9	10
U.S. Wind	189	197	184	8	8
Total - Renewable energy	1,867	1,896	1,885	112	107
Canadian Gas		609	604	43	41
Australian Gas		870	743	63	63
Corporate		-	-	(9)	(8)
Total		3,375	3,232	209	203

Renewable energy production for the three and six months ended June 30, 2017 is higher than the long-term average renewable energy production and last year. Comparable EBITDA increased \$3 million for the quarter and \$5 million year to date compared to 2016, primarily due to higher generation from our wind assets in Ontario.

Canadian Wind

	3 months ended June 30		6 months ended June 30	
	2017	2016	2017	2016
Production (GWh)	640	564	1,484	1,467
Gross installed capacity (MW)	1,132	1,132	1,132	1,132
Revenues	48	45	119	115
Royalties and other costs of sales	3	2	6	5
Comparable gross margin	45	43	113	110
Operations, maintenance, and administration	7	9	15	18
Taxes, other than income taxes	2	1	3	3
Comparable EBITDA	36	33	95	89

Production for the three and six months ended June 30, 2017 was above our long-term average and increased 76 GWh and 17 GWh, respectively, compared to 2016, due to higher wind resource and lower planned outages in Eastern Canada. As a result, Comparable EBITDA for the three and six months ended June 30, 2017 increased \$3 million and \$6 million compared to 2016. Lower operating costs resulting from long-term service contract renegotiations also positively impacted Comparable EBITDA.

(1) Long-term average is calculated on an annualized basis from the average annual energy yield predicted from our simulation model based on historical resource data performed over a period of typically 15 years for wind and 30 years for hydro.

Canadian Hydro

	3 months ended June 30		6 months ended June 30	
	2017	2016	2017	2016
Production (GWh)	171	176	215	234
Gross installed capacity (MW)	112	112	112	112
Revenues	11	11	14	15
Royalties and other costs of sales	2	1	2	2
Comparable gross margin	9	10	12	13
Operations, maintenance, and administration	1	1	2	2
Taxes, other than income taxes	-	1	1	1
Comparable EBITDA	8	8	9	10

Production for the three and six months ended June 30, 2017 decreased 5 GWh and 19 GWh respectively, compared to 2016, due to lower water resource in British Columbia. Although generation is lower than the prior year, it is higher than the long-term average. Comparable EBITDA for the three and six months ended June 30, 2017 remained consistent with 2016.

U.S. Wind

	3 months ended June 30		6 months ended June 30	
	2017	2016	2017	2016
Production (GWh)	75	64	197	184
Gross installed capacity (MW)	144	144	144	144
Revenues	5	3	12	11
Royalties and other costs of sales	1	-	1	1
Comparable gross margin	4	3	11	10
Operations, maintenance, and administration	2	1	3	2
Comparable EBITDA	2	2	8	8

Production at the Wyoming Wind Farm for the three months ended June 30, 2017 increased 11 GWh compared to 2016, due to stronger wind resource. Year-to-date production increased 13 GWh compared to 2016. Year-to-date generation remained higher than the long-term average. Comparable EBITDA for the three and six months ended June 30, 2017 remained consistent with 2016.

Canadian Gas

	3 months ended June 30		6 months ended June 30	
	2017	2016	2017	2016 ⁽¹⁾
Production (GWh)	283	329	609	604
Gross installed capacity (MW)	506	506	506	506
Revenues	53	41	108	88
Fuel and purchased power	21	15	50	34
Comparable gross margin	32	26	58	54
Operations, maintenance, and administration	8	7	15	13
Comparable EBITDA	24	19	43	41

For the three and six months ended June 30, 2017, Comparable EBITDA increased \$5 million and \$2 million, respectively. In the quarter, unrealized mark-to-market and realized hedging gains of \$4 million on financial contracts that do not qualify as

(1) Period from Jan. 6 to June 30, 2016.

hedges for accounting but provide us economic hedges, resulted in higher Comparable EBITDA in 2017. The Sarnia cogeneration facility is highly contracted and is therefore not impacted by fluctuations in production.

Australian Gas

	3 months ended June 30		6 months ended June 30	
	2017	2016	2017	2016
Production (GWh)	472	371	870	743
Gross installed capacity (MW)	425	425	425	425
Revenues	28	29	54	59
Finance lease income ⁽¹⁾	14	15	28	28
Fuel and purchased power	(3)	(5)	(6)	(11)
Comparable gross margin	39	39	76	76
Operations, maintenance, and administration ⁽²⁾	7	8	13	13
Comparable EBITDA	32	31	63	63

Comparable EBITDA remained consistent with 2016 for the three and six months ended June 30, 2017 and is in line with expectations. Due to the nature of our contracts, the change in customer load does not have a significant financial impact as revenues are generally derived from capacity payments and fuel costs are passed through to the customers.

Regulatory and Environmental Legislation

Refer to the Regulatory and Environmental Legislation section of our 2016 Annual MD&A for further details that supplement the recent developments discussed below.

Alberta

We estimate the Alberta Electric System Operator (“AESO”) will need to procure up to 4,100MW of new wind generation under the Renewable Energy Program (“REP”) by 2030 to meet the 30 per cent target for renewable generation established by the Government of Alberta. The AESO completed its consultation on the Round 1 Request for Proposal (“RFP”) process for the REP in the first quarter of 2017 and is currently in the process of procuring the first 400MW of renewable generation. The Request for Qualification stage is currently underway with 23 organizations submitting proposals, including TransAlta. Qualified bidders will be chosen by Sept. 15, 2017 and bidders will need to submit RFP price offers by Oct. 13, 2017. Projects will be awarded a Renewable Energy Supply Agreement in December 2019 that is a contract for differences providing awarded bidders with a fixed price for energy. Projects will be expected to reach commercial operation by 2019.

The government has indicated that the AESO will provide details related to Round 2 and subsequent REP RFPs, and start discussions on the roadmap for procurements to meet the REP target by late August 2017. It has been suggested that subsequent RFPs will include community and indigenous requirements and potentially have carve outs for specific technology types. It was also noted that subsequent procurements for renewable generation may take place in parallel and at a more rapid pace.

The Output-based Allocation Regulation (“OBA”) will replace the current Specified Gas Emitters Regulation (“SGER”) on Jan. 1, 2018. Under SGER, some of our wind facilities receive offset carbon credits based on generation. SGER covered entities can use these credits for SGER carbon compliance purposes, which provides us with a revenue stream. The government has confirmed SGER offset crediting will continue and credits will be fungible under the OBA, ensuring the continuance of this revenue stream. The government has limited carbon credit usage to 30 percent of covered entities’ compliance requirements, reducing demand and unit pricing for offset credits. Nonetheless, increased carbon compliance pricing to up to \$30 per tonne of carbon dioxide equivalents should mitigate price reductions, supporting stable revenues.

(1) Finance lease income adjusted for change in finance lease receivable.

(2) Includes the effect of contractually fixed management costs.

Ontario

In 2016, Ontario put regulations into effect to implement a Greenhouse Gas cap-and-trade program, effective Jan. 1, 2017. Gas-fired electricity generation will be regulated at the gas distribution level. Our gas-fired generation facility in Ontario will not be significantly impacted by virtue of change-in-law provisions within existing contracts.

Liquidity and Capital Resources

Liquidity risk arises from our ability to meet general funding needs, engage in hedging activities, and manage the assets, liabilities, and capital structure of the Corporation. Liquidity risk is managed by maintaining sufficient liquid financial resources to fund obligations as they come due in the most cost-effective manner.

Our liquidity needs are met through a variety of sources, including cash generated from operations, capital markets, and, prior to obtaining an external syndicated credit facility in July 2017, as discussed in Note 16 of our interim condensed consolidated financial statements, funding from TransAlta. Our primary uses of funds are operational expenses, capital expenditures, distributions to the non-controlling interest, interest and principal payments on debt, and dividends.

Financial Position

The following chart highlights significant changes in the Condensed Consolidated Statements of Financial Position from Dec. 31, 2016 to June 30, 2017:

	Increase/ (decrease)	Primary factors explaining change
Property, plant, and equipment, net	(34)	Increased depreciation expense due to the acquisition of the Canadian Assets on Nov. 30, 2016, partially offset by additions
Investments in subsidiaries of TransAlta	77	Additional investments in Australian Assets and strengthening of the Australian dollar
Risk management assets (current and long-term)	8	Increase in value of the hedge on contribution commitment
Deferred income tax assets	(6)	Increase in taxable temporary differences
Long-term debt (including current portion)	(36)	Repayment made on the Melancthon Wolfe and New Richmond bonds as well as on the Canadian Assets working capital loan
Class B shares liability	46	Change in value of the Class B shares related to the increased value of the underlying common shares
Deferred income tax liabilities	13	Decrease in tax loss carryforwards
Equity attributable to shareholders	15	Net earnings partially offset by dividends declared for the period

Cash Flows

The following chart highlights significant changes in the Consolidated Statements of Cash Flows for the three and six months ended June 30, 2017 compared to the same period in 2016:

3 months ended June 30	2017	2016	Change	Primary factors explaining change
Cash and cash equivalents, beginning of period	51	-	51	
Provided by (used in):				
Operating activities	73	70	3	Higher cash earnings of \$28 million offset by unfavourable changes in working capital of \$25 million
Investing activities	(10)	(54)	44	Decrease in investment in subsidiaries of TransAlta of \$48 million, partially offset by an increase in additions to property, plant, and equipment of \$3 million
Financing activities	(99)	(4)	(95)	Lower net proceeds on issuance of long-term debt of \$159 million, partially offset by a net decrease in debt repayments of \$65 million
Cash and cash equivalents, end of period	15	12	3	

6 months ended June 30	2017	2016	Change	Primary factors explaining change
Cash and cash equivalents, beginning of period	15	2	13	
Provided by (used in):				
Operating activities	173	151	22	Higher cash earnings of \$30 million offset by unfavourable changes in working capital of \$8 million
Investing activities	(36)	(228)	192	Decrease in investment in subsidiaries of TransAlta of \$199 million, partially offset by an increase in additions to property, plant, and equipment of \$7 million
Financing activities	(137)	87	(224)	Lower net proceeds on issuance of common shares of \$162 million, lower long-term debt proceeds of \$159 million, and higher repayments of the Canadian Assets working capital loan of \$34 million, partially offset by lower net credit facility repayments of \$79 million and lower long-term debt repayments of \$54 million
Cash and cash equivalents, end of period	15	12	3	

Debt

Debt, including amounts owing to TransAlta, totalled \$1,014 million as at June 30, 2017, compared to \$1,050 million as at Dec. 31, 2016. Debt decreased from Dec. 31, 2016, primarily due to the scheduled semi-annual principal repayments of \$18 million on the Melancthon Wolfe bond and \$3 million on the New Richmond bond. Refer to Note 15 of our most recent annual consolidated financial statements for details on the Melancthon Wolfe and New Richmond bonds. The repayment of \$13 million on the Canadian Assets working capital loan and the decrease in the amount drawn on the credit facility also contributed to the decrease in the debt balance.

As at June 30, 2017, we had a \$350 million Credit Facility with TransAlta available to us for general corporate purposes, including financing ongoing working capital requirements, construction capital requirements, growth opportunities, and for repayment of outstanding borrowings. As at June 30, 2017, \$13 million was drawn and outstanding on the Credit Facility (Dec. 31, 2016 - \$15 million). The Credit Facility with TransAlta was replaced by an external syndicated credit facility as discussed in Note 16 of our interim condensed consolidated financial statements.

At June 30, 2017, including the Credit Facility, the convertible debenture, and the Canadian Assets working capital loan, \$234 million of debt was due to TransAlta (Dec. 31, 2016 - \$249 million).

The unsecured debentures include restrictive covenants requiring the cash proceeds received from the sale of certain assets to be reinvested into similar renewable assets or in the repayment of the non-recourse debentures.

The Melancthon Wolfe Wind, Pingston, and New Richmond bonds are subject to customary financing conditions and covenants that may restrict our ability to access funds generated by the facilities' operations. Upon meeting certain distribution tests, typically performed once per quarter, the funds are able to be distributed by the subsidiary entities to their respective parent entity. These conditions include meeting a debt service coverage ratio prior to distribution, which was met by these entities in the second quarter. However, funds in these entities that have accumulated since the second quarter test, will remain there until the next debt service coverage ratio can be calculated in the third quarter of 2017. As at June 30, 2017, \$11 million of cash was subject to these financial restrictions.

Additionally, the Melancthon Wolfe Wind and New Richmond bonds require that certain reserve accounts be established and funded through cash held on deposit and/or by providing letters of credit. We have elected to use letters of credit as at June 30, 2017. Accordingly, no cash was subject to these restrictions.

The Corporation is subject to customary positive and negative covenants related to debt. We are not in violation of any of these covenants.

Share Capital

On June 30, 2017, and Dec. 31, 2016, we had 224 million common shares and 26 million Class B shares issued and outstanding.

On July 28, 2017, commissioning of South Hedland was achieved and on Aug. 1, 2017, we converted the 26.1 million Class B shares into 26.4 million common shares.

On Aug. 8, 2017, we had 251 million common shares issued and outstanding.

The convertible debenture will mature on Dec. 31, 2020. On the maturity date, TransAlta will have the right, at its sole option, to convert the outstanding principal amount of the convertible debenture, in whole or in part, into common shares of the Corporation at a conversion price of \$13.16 per common share. If on the maturity date TransAlta exercises its conversion option in full, we will issue 16.3 million common shares to TransAlta. If TransAlta does not exercise its conversion option, we may satisfy the principal obligation through the issuance of common shares with a unit value corresponding to 95 per cent of the then-current common share value or repay the debenture with cash.

Other Consolidated Results

Net Interest Expense

The components of net interest expense are shown below:

	3 months ended June 30		6 months ended June 30	
	2017	2016	2017	2016
Interest on debt	8	8	18	18
Interest on letters of credit and guarantees pledged by TransAlta	1	-	1	-
Interest on convertible debenture	3	3	5	5
Loss on redemption of unsecured debenture	-	1	-	1
Accretion of provisions	-	-	1	-
Net interest expense	12	12	25	24

Class B Shares Liability

As at June 30, 2017, 26 million Class B shares were outstanding (Dec. 31, 2016 - 26 million). As the Class B shares are convertible into common shares at a variable rate depending on final construction costs of the South Hedland Facility, they are classified as liabilities and their change in value is recognized in net earnings. The increase in value of the Class B shares of \$46 million year-to-date is unrealized and relates to the change in value of the underlying common shares during the period (net of the effect of estimated foregone dividends, as discounted using a risk-free rate for the period to conversion). Additional information on Class B shares is presented in Note 11 of our interim condensed consolidated financial statements.

The South Hedland Facility achieved commercial operation on July 28, 2017 and, as a result, the 26.1 million Class B shares were converted into 26.4 million common shares.

Subsequent to conversion, no further changes in fair value will arise.

Income Taxes

The Corporation's statutory blended tax rate is 26 per cent. The effective income tax rate can change depending on the mix of earnings from various countries and certain deductions that do not fluctuate with earnings.

Other Comprehensive Income ("OCI")

During the three and six months ended June 30, 2017, we recognized a \$34 million and \$48 million increase, respectively, in fair value in OCI (June 30, 2016 - \$31 million and \$33 million decrease, respectively). The changes in the fair value of available-for-sale instruments during the periods are primarily attributable to the Australian Tracking Preferred Shares. See Note 4 of our interim condensed consolidated financial statements for additional information.

Sustaining Capital Expenditures

Sustaining capital expenditures for assets we directly own, as well as the facilities in which we own economic interests, are noted below for the three and six months ended June 30, 2017 and 2016:

3 months ended June 30	Canadian	Canadian	U.S	Canadian	Australian	Total
	Wind	Hydro	Wind	Gas	Gas	
2017 Total sustaining capital expenditures	2	-	1	7	2	12
2016 Total sustaining capital expenditures	3	1	-	1	5	10

Sustaining capital for the three months ended June 30, 2017 increased \$2 million compared to 2016, due to increased spending in Canadian Gas compared to 2016. The majority of sustaining capital spent in Canadian Gas related to a planned gas turbine major overhaul at the Sarnia cogeneration plant. Sustaining capital expenditures were higher in Australia in the prior year due to planned major maintenance in the second quarter.

6 months ended June 30

	Canadian Wind	Canadian Hydro	U.S Wind	Canadian Gas	Australian Gas	Total
2017 Total sustaining capital expenditures	4	1	1	9	3	18
2016 Total sustaining capital expenditures	4	1	1	3	6	15

Sustaining capital for the six months ended June 30, 2017 increased \$3 million compared to 2016, due to increased spending in Canadian Gas compared to 2016. The majority of sustaining capital spent in Canadian Gas related to a planned gas turbine major overhaul at the Sarnia cogeneration plant.

2017 Outlook

The following table outlines our expectations on key financial targets for 2017:

Measure	Target
Comparable EBITDA	\$425 million to \$450 million
Adjusted funds from operations	\$320 million to \$350 million
Cash available for distribution	\$235 million to \$260 million

Operations

Production

We expect renewable energy production from our wind and hydro assets in 2017 to be in the range of 3,500 to 3,900 GWh. This includes expected generation from the renewable Wyoming Wind Farm. Contracts for gas-fired generation primarily provide compensation for Capacity, and accordingly, production is not a significant performance indicator.

Contracted Cash Flows

Through the use of PPAs, including the TransAlta PPAs, our facilities and those in which we have an economic interest have a weighted average remaining contractual life of approximately 13 years.

Operating Costs

We have established long-term service agreements with suppliers to stabilize operations and maintenance costs. Most of our generation from gas is sold under contracts with pass-through provisions for fuel. For gas generation with no pass-through provision, we purchase natural gas coincident with production, thereby minimizing our exposure to changes in price.

Exposure to Fluctuations in Foreign Currencies

We are exposed to fluctuations in the exchange rate between the Canadian and the US and Australian dollars as a result of our economic interest in the Wyoming Wind Farm and the Australian Assets (including the remaining construction costs for the South Hedland Facility). We also have exposure to the Euro due to the Kent Hills 3 expansion project. The securities acquired from TransAlta and the related dividends received are denominated in Canadian, Australian and US dollars. TransAlta has agreed to provide us with protection against fluctuations in the exchange rates on the first five years of cash flows from the Australian Assets and for the cost of constructing the South Hedland Facility. Any changes in foreign investments or foreign-denominated debt may change our exposure. All our other assets are located in Canada. We may acquire equipment from foreign suppliers in various foreign currencies for future capital projects, which could create exposure to fluctuations in the value of the Canadian dollar relative to these currencies.

Our strategy is to mitigate foreign exchange risk on foreign denominated cash flows to ensure our ability to meet dividend requirements. Cash flows relating to the Australian Assets are predominantly hedged under agreements with TransAlta. In addition, we entered into foreign exchange forwards to hedge US dollar cash flows primarily related to the Wyoming Wind Farm.

Net Interest Expense

Exposure to interest rate risk is not significant as interest rates on long-term debt are largely fixed. Net interest for 2017 is expected to be higher than 2016, due to a higher volume of debt.

Net Debt, Liquidity and Capital Resources

If there are low wind volumes, low hydro resources, or unexpected maintenance costs, we may need additional liquidity in the future. We expect to maintain adequate available liquidity under our new credit facility (see the Significant and Subsequent Events section of this MD&A).

The Corporation manages liquidity risk associated with debentures due in 2018 and beyond by preparing and revising long-term external financing plans reflecting business plans and market availability of capital. The Corporation anticipates refinancing its maturing debt based on reasonable commercial terms, primarily through project-level debt.

Over the next 12 months we expect to raise between \$325 million and \$425 million in project level financing against fully contracted assets. These financings will have debt maturities aligned with the contracted cash flows of the underlying assets. Proceeds from these financings will be used to fund the remaining commitments at South Hedland Facility, and to repay \$193 million of debt that is maturing in 2018.

Income Taxes

The Corporation's statutory blended tax rate is expected to remain at 26 per cent. The effective income tax rate can change depending on the mix of earnings from various countries and certain deductions that do not fluctuate with earnings.

The Corporation's anticipated cash tax horizon is subject to risks, uncertainties, and other factors that could cause the cash tax horizon to occur sooner than our current projection of approximately four years. In particular, our anticipated cash tax horizon is subject to risk pertaining to a change in our operations, asset base, corporate structure, or changes to tax legislation, regulations, or interpretations. In the event we become cash taxable sooner than projected, our CAFD, and our dividend could decrease.

Capital Expenditures **Sustaining Capital**

Our sustaining capital is comprised of the ongoing capital costs associated with maintaining the existing generating Capacity of our facilities. The facilities of TransAlta in which we own economic interests also incur sustaining capital expenditures. While we are not required to fund these expenditures, they reduce the finance income from these investments.

For 2017, our estimate of total sustaining capital expenditures for owned assets and those in which we own an economic interest, ranges from \$40 million to \$45 million.

Construction of South Hedland

During, and subsequent to, the quarter, the final stages of construction of our South Hedland Facility, including reliability runs, were completed. The facility achieved commercial operation on July 28, 2017. On July 19, 2017, we funded \$160 million of project expenditures which relate to infrastructure acquisition and network, water and gas access deposits. We expect to contribute approximately \$42 million by the end of 2017.

Financing

Financing for these capital expenditures is expected to be provided by cash flow from operating activities, capital market transactions, and our new credit facility (see the Significant and Subsequent Events section of this MD&A).

Financial Instruments

Refer to Note 12 of our most recent annual consolidated financial statements and Note 7 of our interim condensed consolidated financial statements for the three and six months ended June 30, 2017 for details on Financial Instruments. Also, refer to the Financial Instruments section of our most recent annual MD&A for additional details. Our risk management profile and practices have not changed materially since Dec. 31, 2016, except for that in the first quarter of 2017, we discontinued hedge accounting for a cash flow hedge on our US\$20 million debt.

At June 30, 2017, Level III financial instruments were comprised of financial assets with a carrying value of \$881 million (Dec. 31, 2016 - \$841 million) and financial liabilities with a carrying value of \$430 million (Dec. 31, 2016 - \$384 million). The decrease in the net asset position is attributable to the Australian Tracking Preferred Shares and the Class B shares liability. Refer to Notes 4, 7, and 11 in the interim condensed consolidated financial statements for the three and six months ended June 30, 2017 for additional information on these measurements.

Related-Party Transactions and Balances

Related-Party Transactions

Amounts recognized from transactions with TransAlta or subsidiaries of TransAlta are as follows:

	3 months ended June 30		6 months ended June 30	
	2017	2016	2017	2016
Revenue from TransAlta PPAs	9	8	19	20
Finance income related to subsidiaries of TransAlta	24	27	47	73
G&A Reimbursement Fee	5	4	9	8
Interest expense	4	3	6	6
Asset optimization fee	-	-	1	-
Realized foreign exchange gain on hedge of contribution commitment	-	-	1	-

Certain subsidiaries of TransAlta provide asset management and optimization services and procure gas for the Corporation's Sarnia cogeneration plant. The Sarnia cogeneration plant is charged a fixed fee of approximately \$0.125 million per quarter, plus a variable fee of 1.6 per cent of its gross margin.

Related-Party Balances

Related-party balances include the following:

As at	June 30, 2017	Dec. 31, 2016
Trade and other receivables	15	36
Accounts payable and accrued liabilities (including interest payable)	6	11
Dividends payable	20	29
Investments in subsidiaries of TransAlta	1,722	1,645
Net risk management assets	7	-
Convertible debenture	215	215
Class B shares liability	430	384
Credit Facility	13	15
Canadian Assets working capital loan	6	19
Letters of credit issued by TransAlta on behalf of the Corporation	59	60
Guarantees provided by TransAlta on behalf of the Corporation	108	58
Indemnification guarantee provided by the Corporation to TransAlta	939	925

All these balances are with TransAlta or subsidiaries of TransAlta.

Accounting Changes

Critical Accounting Estimates

The critical accounting estimates were made consistent with our most recent annual MD&A for Dec. 31, 2016.

Current Accounting Changes

During the first quarter of 2017, we identified a misstatement in the disclosure on the condensed consolidated statement of cash flows of cash interest paid for the three months ended June 30, 2016, which was previously stated as \$12 million. As a result, we restated our three months June 30, 2016 cash interest paid to \$22 million. The six months June 30, 2016 cash interest paid was not misstated in the prior year. The restatement does not have an impact on net earnings, earnings per share, or cash flow from operating activities for the three and six months ended June 30, 2016.

Future Accounting Changes

Accounting standards that have been previously issued by the International Accounting Standards Board ("IASB") but are not yet effective, and have not been applied by us, include IFRS 9 *Financial Instruments*, IFRS 15 *Revenue from Contracts with Customers*, and IFRS 16 *Leases*. Refer to Note 3 of our most recent annual consolidated financial statements for information regarding the requirements of IFRS 9, IFRS 15, and IFRS 16. We continue to make progress on its implementation plan for each standard. As part of each implementation plan, a centralized project team has been created to manage project activities. A stakeholder committee has been formed to oversee the implementation process and it includes individuals from the relevant functions and business units.

With respect to IFRS 9, we are in the process of completing the assessment of the classification and measurement portion of the standard. Activities to identify and calculate impacts from the impairment portion of the standard have commenced. In addition, the review of process and disclosure requirements has commenced. It is not yet possible to make a reliable estimate of the impact of IFRS 9 on the financial statements and disclosures. Our current estimate of the time and effort necessary to complete the implementation plan for IFRS 9 extends into late 2017.

With respect to IFRS 15, we are in the process of completing the accounting assessment of our revenue streams and underlying contracts with customers. In addition, the review of process and disclosure requirements has commenced. The

majority of our revenues within the scope of IFRS 15 are earned through the sale of energy and green attributes. Commentary on implementation issues specific to the power and utilities industry is in the process of being discussed and issued by standard setters in the United States. Certain implementation commentary is expected to be relevant to our assessment of our long-term contracts. It is not yet possible to make a reliable estimate of the impact of IFRS 15 on the financial statements and disclosures. Our current estimate of the time and effort necessary to complete our implementation plan for IFRS 15 extends into late 2017. We anticipate finalizing a decision with respect to the transition method by late 2017.

We are in the process of completing our initial scoping assessment for IFRS 16 and have prepared a detailed project plan. We anticipate that most of the effort under the implementation plan will occur in late 2017 through mid-2018. It is not yet possible to make reliable estimates of the potential impact of IFRS 16 on the financial statements and disclosures.

Selected Quarterly Information

	Q3 2016	Q4 2016	Q1 2017	Q2 2017
Revenue	45	94	129	112
Net earnings attributable to common shareholders	23	26	27	22

CAFD	28	78	82	38
Net earnings (loss) per share attributable to common shareholders, basic and diluted	0.32	0.56	(0.16)	(0.07)
CAFD per share	0.15	0.41	0.37	0.17

Our business results fluctuate with seasonal variations, with the first and fourth quarters seeing the largest wind volumes and the second and third quarters recording higher hydro volumes. As wind generation forms a larger part of our renewable fleet, higher revenues and earnings are expected in the first and fourth quarters. On Jan. 6, 2016, we acquired an economic interest in the cash flows generated by the Canadian Assets, adding 611 MW to our existing Capacity, and subsequently, on Nov. 30, 2016, we acquired ownership of the Canadian Assets. In May 2015, we acquired an economic interest in the cash flows generated by the Australian Assets, and approximately doubled our capitalization. The earnings after this investment include various effects arising from financial instruments, which have impacted net earnings attributable to common shareholders for the above noted quarters as following:

- Unfavourable changes in the fair value of the Class B shares liability in all quarters.
- Foreign exchange losses on the Australian-dollar-denominated instruments in the second quarter of 2017, the first, second, and fourth quarters of 2016, with gains in the first quarter of 2017, third quarter of 2016, and the fourth quarter of 2015.

Controls and Procedures

Management has evaluated, with the participation of our President and Designated Chief Executive Officer and Chief Financial Officer, the effectiveness of our disclosure controls and procedures as of the end of the period covered by this report. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by us in our report is accumulated and communicated to management, including our President and Designated Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding our required disclosure. In designing and evaluating our disclosure controls and procedures, management is required to apply its judgment in evaluating and implementing possible controls and procedures.

There has been no change in the internal control over financial reporting during the period covered by this report that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting. Based on the foregoing evaluation, our President and Designated Chief Executive Officer and Chief Financial Officer have concluded that, as of June 30, 2017, the end of the period covered by this report, our disclosure controls and procedures and our internal controls over financial reporting were effective.

Notes to Condensed Consolidated Financial Statements (Unaudited)

(Tabular amounts in millions of Canadian dollars, except as otherwise noted)

1. Background and Accounting Policies

A. The Corporation

TransAlta Renewables Inc. (“TransAlta Renewables” or the “Corporation”), a subsidiary of TransAlta Corporation (“TransAlta”), owns and operates 13 hydro facilities, 17 wind farms, and one gas plant, with a total installed capacity of 1,747 megawatts (“MW”) and holds economic interests in TransAlta’s 144 MW Wyoming wind farm and 425 MW Australian gas-fired generation assets, including the 150 MW South Hedland Facility that was commissioned on July 28, 2017, as well as a 270 kilometre gas pipeline. These assets are substantially all contracted. The Corporation’s head office is located in Calgary, Alberta.

B. Basis of Preparation

These interim condensed consolidated financial statements have been prepared by management in compliance with International Accounting Standard (“IAS”) 34 *Interim Financial Reporting* using the same accounting policies as those used in the Corporation’s most recent annual consolidated financial statements. These interim condensed consolidated financial statements do not include all of the disclosures included in the Corporation’s annual consolidated financial statements. Accordingly, these condensed consolidated financial statements should be read in conjunction with the Corporation’s most recent annual consolidated financial statements which are available on SEDAR at www.sedar.com.

The interim condensed consolidated financial statements include the accounts of the Corporation and the subsidiaries that it controls.

The interim condensed consolidated financial statements have been prepared on a historical cost basis, except for certain financial instruments, which are stated at fair value.

The interim condensed consolidated financial statements are presented in Canadian dollars, which is the Corporation’s functional and presentation currency.

The interim condensed consolidated financial statements reflect all adjustments that consist of normal recurring adjustments and accruals that are, in the opinion of management, necessary for a fair presentation of results. The Corporation’s results are partly seasonal due to the nature of electricity, which is generally consumed as it is generated and the nature of wind and run-of-river hydro resources, which fluctuate based on both seasonal patterns and annual weather variation. Typically, run-of-river hydro facilities generate most of their electricity and revenues during the spring and summer months when melting snow starts feeding watersheds and rivers. Inversely, wind speeds are historically greater during the cold winter months and lower in the warm summer months.

These interim condensed consolidated financial statements were authorized for issue by the Audit Committee on behalf of the Board of Directors on Aug. 8, 2017.

C. Use of Estimates and Significant Judgments

The preparation of these interim condensed consolidated financial statements in accordance with IAS 34 requires management to use judgment and make estimates and assumptions that could affect the reported amounts of assets, liabilities, revenues, and expenses, and disclosures of contingent assets and liabilities. These estimates are subject to uncertainty. Actual results could differ from these estimates due to factors such as fluctuations in interest rates, foreign exchange rates, inflation and commodity prices, and changes in economic conditions, legislation, and regulations. Refer to Note 2(Q) of the Corporation's most recent annual consolidated financial statements for a more detailed discussion of the significant accounting judgments and key sources of estimation uncertainty.

Judgment was applied in the first and second quarters of 2017 in relation to the assessment of dividends as income or return of capital, as follows:

The Corporation receives dividends from its investment in the preferred shares tracking adjusted TransAlta Energy (Australia) Pty Ltd ("TEA") amounts. Determining whether a dividend represents in substance a return of capital requires significant judgment. The Corporation determines the amount of dividends that represent a return of capital based on the lower of: i) the difference, if positive, between the cost base of the shares and their fair value, at the end of the reporting period; and ii) the actual dividend declared on the shares during the reporting period. When it is determined that a dividend represents a return of capital, the carrying amount of the related investment is reduced. No return of capital arose in the first or second quarters of 2017.

2. Accounting Changes

A. Current Accounting Changes

During the first quarter of 2017, the Corporation identified a misstatement in the disclosure on the condensed consolidated statement of cash flows of cash interest paid for the three months ended June 30, 2016, which was previously stated as \$12 million. As a result, the Corporation restated its three months ended June 30, 2016 cash interest paid to \$22 million. The six months ended June 30, 2016 cash interest paid was not misstated in the prior year. The restatement does not have an impact on net earnings, earnings per share, or cash flow from operating activities for the three and six months ended June 30, 2016.

B. Future Accounting Changes

Accounting standards that have been previously issued by the International Accounting Standards Board ("IASB") but are not yet effective, and have not been applied by the Corporation, include International Financial Reporting Standards ("IFRS") 9 *Financial Instruments*, IFRS 15 *Revenue from Contracts with Customers*, and IFRS 16 *Leases*. Refer to Note 3 of the Corporation's most recent annual consolidated financial statements for information regarding the requirements of IFRS 9, IFRS 15, and IFRS 16. The Corporation continues to make progress on its implementation plan for each standard. As part of each implementation plan, a centralized project team has been created to manage project activities. A stakeholder committee has been formed to oversee the implementation process and it includes individuals from the relevant functions and business units.

With respect to IFRS 9, the Corporation is in the process of completing the assessment of the classification and measurement portion of the standard. Activities to identify and calculate impacts from the impairment portion of the standard have commenced. In addition, the review of process and disclosure requirements has commenced. It is not yet possible to make a reliable estimate of the impact of IFRS 9 on the financial statements and disclosures. The Corporation's current estimate of the time and effort necessary to complete the implementation plan for IFRS 9 extends into late 2017.

With respect to IFRS 15, the Corporation is in the process of completing the accounting assessment of its revenue streams and underlying contracts with customers. In addition, the review of process and disclosure requirements has commenced. The majority of the Corporation's revenues within the scope of IFRS 15 are earned through the sale of energy and green attributes. Commentary on implementation issues specific to the power and utilities industry is in the process of being discussed and issued by standard setters in the United States. Certain implementation commentary is expected to be relevant to the assessment of the Corporation's long-term contracts. It is not yet possible to make a reliable estimate of the impact of IFRS 15 on the financial statements and disclosures. The Corporation's current estimate of the time and effort necessary to complete the implementation plan for IFRS 15 extends into late 2017. The Corporation anticipates finalizing a decision with respect to the transition method by late 2017.

The Corporation is in the process of completing its initial scoping assessment for IFRS 16 and has prepared a detailed project plan. The Corporation anticipates that most of the effort under the implementation plan will occur in late 2017 through mid-2018. It is not yet possible to make reliable estimates of the potential impact of IFRS 16 on the Corporation's financial statements and disclosures.

3. Significant Events

2017

South Hedland Facility

During the second quarter, the South Hedland Facility was in the final stages of construction with all units completing reliability runs. The facility achieved commercial operations on July 28, 2017.

Kent Hills 3 Wind Project

During the second quarter of 2017, the Corporation entered into a long-term contract with the New Brunswick Power Corporation for the sale of all power generated by an additional 17 MW of capacity from the Kent Hills wind project.

This is an expansion project of our existing Kent Hills wind farms on approximately five to ten acres of Crown Land, increasing the total operating capacity of the Kent Hills wind farm to approximately 167 MW. As part of the regulatory process, the Corporation is submitting an Environmental Impact Assessment to the Province of New Brunswick in the third quarter of 2017. If environmental approvals are received, the Corporation expects to begin the construction phase during the spring of 2018.

2016

Investment in TransAlta's Sarnia Cogeneration Plant, Le Nordais Wind Farm, and Ragged Chute Hydro Facility

On Jan. 6, 2016, the Corporation invested in an economic interest based on the cash flows of TransAlta's Sarnia cogeneration plant, Le Nordais wind farm, and Ragged Chute hydro facility (collectively, the "Canadian Assets") for a combined value of approximately \$540 million. The Corporation's investment consisted of the acquisition of tracking preferred shares of a subsidiary of TransAlta that provided the Corporation with an economic interest based on cash flows broadly equal to the underlying net distributable profits of the entities that own the Canadian Assets. As consideration, the Corporation provided to TransAlta, \$173 million in cash, 15,640,583 common shares with a value of \$152 million, and a \$215 million convertible unsecured subordinated debenture. The Corporation funded the cash consideration of the purchase price primarily through the issuance of 17,692,750 common shares by way of public offering at a price of \$9.75 per share.

On Nov. 30, 2016, the preferred shares tracking adjusted Canadian Assets amounts were redeemed by the issuing subsidiary of TransAlta at their fair value of \$520 million. Also on Nov. 30, 2016, the Corporation acquired direct ownership of the Canadian Assets from a subsidiary of TransAlta for a purchase price of \$520 million. The redemption of the preferred shares and the acquisition of the direct ownership in the Canadian Assets were subject to a set-off arrangement and resulted in no cash payments being made. The Corporation also acquired working capital and certain capital spares totalling \$19 million, through the issuance of a non-interest bearing loan (see Note 9).

4. Finance Income Related to Subsidiaries of TransAlta

Finance income related to subsidiaries of TransAlta is comprised of income from various interests that in aggregate and over time indirectly provide the Corporation with cash flows based on the cash flows of TEA and TransAlta Wyoming Wind LLC, and, in 2016, the Canadian Assets.

	3 months ended June 30		6 months ended June 30	
	2017	2016	2017	2016
Interest income from investment in mandatory redeemable preferred shares of TEA ("MRPS")	11	10	22	20
Dividend income from investment in preferred shares	1	1	2	1
Fee income from indirect guarantee of TEA obligations	6	6	11	12
Dividend income from investment in preferred shares tracking adjusted TEA amounts	4	-	6	8
Total finance income related to TEA	22	17	41	41
Dividend income from investment in preferred shares tracking adjusted Canadian Assets amounts	-	9	-	28
Dividend income from investment in preferred shares tracking earnings and distributions of TransAlta Wyoming Wind LLC	2	1	6	4
Total	24	27	47	73

A summary of investments in subsidiaries of TransAlta is as follows:

As at	June 30, 2017	Dec. 31, 2016
Investment in MRPS	638	613
Investment in preferred shares tracking adjusted TEA amounts	881	841
Investment in preferred shares of TEA	69	52
Total investments in subsidiaries related to TEA	1,588	1,506
Investment in preferred shares tracking earnings and distributions of TransAlta Wyoming Wind LLC	134	139
Total investment in subsidiaries of TransAlta	1,722	1,645

Investment in Subsidiaries of TransAlta Related to TEA:

Changes in the investments in subsidiaries of TransAlta that relate to TEA are detailed as follows:

	MRPS ⁽¹⁾	Preferred shares tracking adjusted TEA amounts	Preferred shares of TEA ⁽²⁾	Total
Investment balance at Dec. 31, 2016	613	841	52	1,506
Additional investment	13	-	9	22
Unrealized foreign exchange gains recognized in earnings	12	-	-	12
Net change in fair value recognized in OCI	-	40	8	48
Investment balance at June 30, 2017	638	881	69	1,588

(1) Principal amount as at June 30, 2017 was AUD\$654 million (Dec. 31, 2016 - AUD\$641 million).

(2) Principal amount as at June 30, 2017 was AUD\$63 million (Dec. 31, 2016 - AUD\$54 million).

During the second quarter the preferred shares tracking adjusted TEA amounts increased by \$27 million. The change in fair value in the quarter is primarily the result of the change in the discount rate used in the discounted cash flow model.

	MRPS ⁽¹⁾	Preferred shares tracking adjusted TEA amounts	Preferred shares of TEA ⁽²⁾	Total
Investment balance at Dec. 31, 2015	589	804	29	1,422
Additional investment	34	-	14	48
Unrealized foreign exchange losses recognized in earnings	(26)	-	-	(26)
Net change in fair value recognized in OCI	-	(35)	2	(33)
Investment balance at June 30, 2016	597	769	45	1,411

(1) Principal amount as at June 30, 2016 was AUD\$627 million (Dec. 31, 2015 - AUD\$592 million).

(2) Principal amount as at June 30, 2016 was AUD\$47 million (Dec. 31, 2015 - AUD\$32 million).

The Corporation estimated the fair value of the preferred shares tracking adjusted TEA amounts utilizing significant unobservable inputs such as TEA's long-range forecast as part of a discounted cash flow model, as outlined in Note 7(B)(1)(c).

Key assumptions in respect of significant unobservable inputs used in the fair value measurement include the discount rate and the quarterly cash flows from the instrument and guarantee fees. The forecast extends over 31 years. The table below summarizes quantitative data regarding these unobservable inputs:

Unobservable input	June 30, 2017	Dec. 31, 2016
Discount rate	6.7 per cent	7.2 per cent
Quarterly cash flows	Average of \$15.4	Average of \$15.6

The following table summarizes the impact on the fair value measurement of a change in the above unobservable inputs to reflect reasonably possible alternative assumptions:

Unobservable input	Alternative assumption	Change in fair value as at June 30, 2017	Change in fair value as at Dec. 31, 2016
Discount rates	-10 basis points decrease	7.7	7.3
	+10 basis points increase	(7.6)	(7.1)
Quarterly cash flows	+1% increase	8.8	8.4
	- 1% decrease	(8.8)	(8.4)

5. Net Interest Expense

The components of net interest expense are as follows:

	3 months ended June 30		6 months ended June 30	
	2017	2016	2017	2016
Interest on long-term debt	8	8	18	18
Interest on letters of credit and guarantees pledged by TransAlta	1	-	1	-
Interest on convertible debenture	3	3	5	5
Loss on redemption of unsecured debenture	-	1	-	1
Accretion of provisions	-	-	1	-
Net interest expense	12	12	25	24

6. Income Taxes

The components of income tax expense are as follows:

	3 months ended June 30		6 months ended June 30	
	2017	2016	2017	2016
Current income tax expense	1	3	3	3
Deferred income tax recovery arising from the reversal of a writedown of deferred tax assets	-	(1)	-	(1)
Deferred income tax expense related to the origination and reversal of temporary differences	6	2	19	4
Deferred income tax expense related to investment in subsidiary	-	3	-	3
Deferred income tax expense resulting from changes in tax rates	-	-	-	1
Income tax expense	7	7	22	10

Presented in the Condensed Consolidated Statements of Earnings (Loss) as follows:

	3 months ended June 30		6 months ended June 30	
	2017	2016	2017	2016
Current income tax expense	1	3	3	3
Deferred income tax expense	6	4	19	7
Income tax expense	7	7	22	10

7. Financial Instruments and Risk Management

A. Financial Assets and Liabilities – Measurement

Financial assets and financial liabilities are measured on an ongoing basis at fair value or amortized cost.

B. Fair Value of Financial Instruments

The Corporation's financial instruments measured at fair value are as follows:

As at	June 30, 2017		Dec. 31, 2016	
	Fair value Level II	Fair value Level III	Fair value Level II	Fair value Level III
Preferred shares tracking adjusted TEA amounts ⁽¹⁾	-	881	-	841
Preferred shares of TEA	69	-	52	-
Net risk management assets	7	-	-	-
Class B shares liability	-	(430)	-	(384)

(1) Excludes TransAlta Wyoming Wind LLC as the investment in preferred shares is measured at cost.

I. Level I, II, and III Fair Value Measurements

The Level I, II, and III classifications in the fair value hierarchy utilized by the Corporation are defined below. The fair value measurement of a financial instrument is included in only one of the three levels, the determination of which is based on the lowest level input that is significant to the derivation of the fair value.

a. Level I

Fair values are determined using inputs that are quoted prices (unadjusted) in active markets for identical assets or liabilities that the Corporation has the ability to access at the measurement date.

b. Level II

Fair values are determined, directly or indirectly, using inputs that are observable for the asset or liability, either directly or indirectly.

Fair values within the Level II category are determined through the use of quoted prices in active markets, which in some cases are adjusted for factors specific to the asset or liability, such as basis, credit valuation, and location differentials.

The Corporation's commodity risk management Level II financial instruments include over-the-counter derivatives with values based on observable commodity futures curves and derivatives with inputs validated by broker quotes or other publicly available market data providers. Level II fair values are also determined using valuation techniques, such as option pricing models and regression or extrapolation formulas, where the inputs are readily observable, including commodity prices for similar assets or liabilities in active markets, and implied volatilities for options.

In determining Level II fair values of other risk management assets and liabilities and the preferred shares of TEA measured and carried at fair value, the Corporation uses observable inputs other than unadjusted quoted prices that are observable for the asset or liability, such as interest rate yield curves and currency rates. For certain financial instruments where insufficient trading volume or lack of recent trades exists, the Corporation relies on similar interest or currency rate inputs and other third-party information such as credit spreads. The fair value of the preferred shares of TEA is determined by calculating an implied price based on a current assessment of the yield to maturity.

c. Level III

Fair values are determined using inputs for the asset or liability that are not readily observable.

In estimating the fair value of the preferred shares tracking adjusted TEA amounts, the Corporation uses a discounted cash flow method, and makes estimates and assumptions about sales prices, production, capital expenditures, asset retirement costs, and other related cash inflows and outflows over the life of the facilities, as well as the remaining life of the facilities. In developing these assumptions, management uses estimates of contracted and merchant prices, anticipated production levels, planned and unplanned outages, changes to regulations, and transmission capacity or constraints for the estimated remaining life of the facilities. Appropriate discount rates reflecting the risks specific to TEA are used in the valuations. Management also develops assumptions in respect of ongoing financing and tax positions of TEA. These estimates and assumptions are susceptible to change from period to period and actual results can, and often do, differ from the estimates, and can have either a positive or negative impact on the estimate of the fair value of the instrument, and such differences may be material. Additional disclosures on these measurements are presented in Note 4.

Estimates of the fair value of the Class B shares liability can vary based on the estimated cost of construction and commissioning of the South Hedland Facility by TEA, which could vary based on emergent or unforeseen capital needs of the project, or release of uncommitted planned contingency funds. Additional disclosures on this measurement are presented in Note 11.

II. Commodity and Other Risk Management Assets and Liabilities

The Corporation's commodity-based risk management assets and liabilities relate to trading activities and certain contracting activities. Other risk management assets and liabilities include risk management assets and liabilities that are used in hedging foreign currency exposures, including those related to the South Hedland Facility contribution agreement described in Note 13(D).

The following table summarizes the net risk management assets as at June 30, 2017 and Dec. 31, 2016:

	Cash flow		Total
	hedges	Non-hedges	
	Level II	Level II	
Net risk management assets at June 30, 2017	-	7	7
Net risk management assets at Dec. 31, 2016	-	-	-

The change in non-hedge assets is primarily attributable to the hedge on contribution commitments, and is reflected in foreign exchange gains and losses.

During the first quarter of 2017, the Corporation discontinued hedge accounting for its cash flow hedge of its US\$20 million debt. The cumulative gain on the cash flow hedge will continue to be deferred in accumulated other comprehensive income and will be reclassified to net earnings when the forecasted transaction occurs.

III. Financial Instruments – Not Measured at Fair Value

The fair value of financial instruments not measured at fair value is as follows:

As at	June 30, 2017		Dec. 31, 2016	
	Fair value Level II	Carrying value	Fair value Level II	Carrying value
MRPS	644	638	613	613
Convertible debenture	214	215	216	215
Long-term debt ⁽¹⁾	786	791	831	827

⁽¹⁾ Includes current portion.

The fair value of the Corporation's unsecured debentures is determined using prices observed in secondary markets. The fair value of the MRPS, the liability component of the convertible debenture, and other long-term debt is determined by calculating an implied price based on a current assessment of the yield to maturity.

The book value of other short-term financial assets and liabilities (cash and cash equivalents, trade and other receivables, accounts payable and accrued liabilities, and dividends payable) approximates fair value due to the liquid nature of the asset or liability.

The Corporation's investment in the preferred shares tracking earnings and distributions of TransAlta Wyoming Wind LLC continues to be measured at cost under similar conditions as described in Note 12(B)(IV) of the Corporation's most recent annual consolidated financial statements.

C. Nature and Extent of Risks Arising from Financial Instruments and Derivatives

The following discussion is limited to specific risk measures, which are more fully discussed in Note 12(C) of the Corporation's most recent annual consolidated financial statements.

I. Credit Risk

The Corporation's maximum exposure to credit risk at June 30, 2017, without taking into account collateral held or right of set-off, and including indirect exposures arising from the Corporation's investment in preferred shares tracking adjusted TEA amounts is detailed as follows:

Component	Amount	Key risk assessment factors
<i>Direct exposure</i>		
Trade accounts receivable	64	Approximately 76% of the Corporation's unrelated receivables are due from investment-grade counterparties. As at June 30, 2017, TransAlta maintains investment grade ratings from three credit rating agencies. At June 30, 2017, the Corporation had three unrelated customers whose outstanding balances each accounted for greater than 10 per cent of the total third-party trade accounts receivable outstanding. The Corporation has evaluated the risk of default related to these customers to be minimal.
Distributions receivable from subsidiaries of TransAlta	4	As the distribution declarations were made by paying entities and having regard to the sufficiency of funds available, the risk of default has been assessed as minimal.
MRPS	638	The MRPS form TEA's least subordinate significant form of long-term financing, which benefits from TEA's contract and counterparty profile.
Total - Direct exposure	706	
<i>Indirect exposure</i>		
Accounts receivable and finance lease receivable of TEA	492	TEA had one unrelated below investment grade customer whose outstanding balances accounted for 91% of total trade accounts receivable and finance lease receivable. Risk of significant loss arising from this counterparty has been assessed as low in the near term, but could increase to moderate in an environment of sustained low commodity prices over the mid- to long-term. This assessment takes into consideration the counterparty's financial position, external rating assessments, and how TEA provides its services in an area of the counterparty's lower-cost operations, and TransAlta's other credit risk management practices.
Total	1,198	

The Corporation uses external credit ratings, as well as internal ratings in circumstances where external ratings are not available, to establish credit limits for counterparties. In certain cases, the Corporation will require security instruments such as parental guarantees, letters of credit, cash collateral or third party credit insurance to reduce overall credit risk. As at June 30, 2017, no significant component of the amounts forming part of the Corporation's exposure to credit risk was either past due or impaired.

II. Other Market Risks

The Corporation is exposed to market risks based on changes in the fair value of the Class B shares, the preferred shares of TEA, and the preferred shares tracking adjusted TEA amounts. A one per cent increase (decrease) in the value of these securities would result in a \$4 million decrease (increase) in net income, and a \$9 million increase (decrease) in other comprehensive income.

III. Liquidity Risk

The following table presents the contractual maturities of the Corporation's financial liabilities as at June 30, 2017, including committed contributions under the terms of the Contribution Agreement:

	2017	2018	2019	2020	2021	2022 and thereafter	Total
Accounts payable and accrued liabilities	28	-	-	-	-	-	28
Long-term debt	21	254	40	40	41	403	799
Convertible debenture ⁽¹⁾	-	-	-	215	-	-	215
Net risk management assets	(7)	-	-	-	-	-	(7)
Interest on long-term debt ⁽²⁾	28	27	19	18	16	65	173
Interest on convertible debenture ⁽²⁾	5	10	10	9	-	-	34
Dividends payable	33	-	-	-	-	-	33
South Hedland contribution commitment ⁽²⁾	202	-	-	-	-	-	202
Total	310	291	69	282	57	468	1,477

(1) The Corporation may settle the obligation in common shares if the holder's conversion option is not exercised.

(2) Not recognized as a financial liability on the Condensed Consolidated Statements of Financial Position.

The Corporation manages liquidity risk associated with its long-term debt and committed contributions by preparing and revising long-term external financing plans reflecting business plans and market availability of capital.

The Class B shares liability is to be settled by the issuance of common shares, and accordingly, does not give rise to liquidity risk (See Note 16).

IV. Foreign Currency Rate Risk

The foreign currency risk sensitivities outlined below are limited to the risks that arise on financial instruments denominated in currencies other than the Corporation's functional currency.

The possible effect on net earnings and other comprehensive income, due to changes in foreign exchange rates associated with financial instruments denominated in currencies other than the Corporation's functional currency, is outlined below. The sensitivity analysis has been prepared using management's assessment that an average four cent (2016 - four cent) increase or decrease in these currencies relative to the Canadian dollar is a reasonable potential change over the next quarter.

6 months ended June 30	2017		2016	
	Net earnings increase ⁽¹⁾	OCI gain ⁽¹⁾	Net earnings increase ⁽¹⁾	OCI gain ⁽¹⁾
Currency				
USD	5	19	3	16
AUD	22	34	23	36
EUR	-	1	-	-
Total	27	54	26	52

(1) These calculations assume an increase in the value of this currency relative to the Canadian dollar. A decrease would have the opposite effect.

8. Property, Plant, and Equipment

A reconciliation of the changes in the carrying amount of property, plant and equipment (“PP&E”) is as follows:

	Hydro generation	Wind generation	Gas generation	Capital spares and other	Total
As at Dec. 31, 2016	193	1,384	329	24	1,930
Additions	1	4	10	(1)	14
Depreciation	(4)	(32)	(15)	-	(51)
Retirements	(1)	-	-	-	(1)
Revisions and additions to decommissioning costs	2	1	2	-	5
Transfers	-	1	5	(7)	(1)
As at June 30, 2017	191	1,358	331	16	1,896

9. Long-Term Debt

A. Amounts Outstanding

As at	June 30, 2017			Dec. 31, 2016		
	Carrying value	Face value	Interest ⁽¹⁾	Carrying value	Face value	Interest ⁽¹⁾
Credit facility ⁽²⁾	13	13	2.86%	15	15	2.88%
Unsecured debentures ⁽³⁾	192	193	6.31%	193	193	6.31%
Pingston bond	45	45	2.95%	45	45	2.95%
Melancthon Wolfe Wind bond	385	390	3.83%	402	407	3.83%
New Richmond bond	150	152	3.96%	153	155	3.96%
Canadian Assets working capital loan	6	6	-	19	19	-
	791	799		827	834	
Less: current portion	(254)	(254)		(70)	(70)	
Total long-term debt	537	545		757	764	

(1) Interest rate reflects the stipulated rate or the average rate weighted by principal amounts outstanding.

(2) The Corporation has a \$350 million credit facility with TransAlta (Dec. 31, 2016 - \$350 million) which is available for general corporate purposes, including financing ongoing working capital requirements (See Note 16).

(3) Includes US\$20.0 million (Dec. 31, 2016 - US\$20.0 million).

B. Restrictions

Unsecured debentures contain restrictive covenants requiring the cash proceeds received from the sale of certain assets to be reinvested into similar renewable assets or in the repayment of the unsecured debentures.

The Melancthon Wolfe Wind, Pingston, and New Richmond bonds are subject to customary financing conditions and covenants that may restrict the Corporation’s ability to access funds generated by the facilities’ operations. Upon meeting certain distribution tests, typically performed once per quarter, the funds are able to be distributed by the subsidiary entities to their respective parent entity. These conditions include meeting a debt service coverage ratio prior to distribution, which was met by these entities in the second quarter. However, funds in these entities that have accumulated since the second quarter test, will remain there until the next debt service coverage ratio can be calculated in the third quarter of 2017. As at June 30, 2017, \$11 million of cash was subject to these financial restrictions.

Additionally, the Melancthon Wolfe Wind and New Richmond bonds require that certain reserve accounts be established and funded through cash held on deposit and/or by providing letters of credit. The Corporation has elected to use letters of credit as at June 30, 2017. Accordingly, no cash was subject to these restrictions.

C. Security

The Melancthon Wolfe Wind, Pingston, and New Richmond bonds are secured by a first ranking charge over all of the respective assets, including PP&E with a total carrying amount of \$852 million (Dec. 31, 2016 - \$870 million), of the Corporation's subsidiaries that issued the bonds, being Melancthon Wolfe Wind L.P., Pingston Power Inc., and New Richmond Wind L.P., respectively.

10. Convertible Debenture

As part of the Canadian Assets investment on Jan. 6, 2016, the Corporation issued a \$215 million convertible unsecured subordinated debenture to TransAlta. The debenture is on an interest-only basis at a coupon rate of 4.5 per cent per annum, payable semi-annually in arrears on June 30 and Dec. 31, and will mature on Dec. 31, 2020.

See Note 18 of the Corporation's most recent annual consolidated financial statements for more information about the convertible debenture.

11. Class B Shares Liability

As at June 30, 2017, there were 26 million Class B shares outstanding (Dec. 31, 2016 - 26 million). The Class B shares provide voting rights equivalent to the common shares, are non-dividend paying, and are convertible to common shares when the South Hedland Facility is fully commissioned.

As the Class B shares are convertible into common shares at a variable rate, they are classified as liabilities and their change in value is recognized in net earnings. Changes in the value of the Class B shares are unrealized and relate to the change in value of underlying common shares during the period, net of the effect of estimated foregone dividends, as discounted using a risk-free rate for the period to conversion.

The estimated commissioning date and total costs for the construction of the South Hedland Facility were based on significant assumptions relating to unobservable inputs, any one of which may materially affect the estimates. As at June 30, 2017, commissioning was anticipated to occur in late July and costs were estimated to be on target. A one per cent increase or decrease in costs would result in a \$7 million corresponding decrease or increase in fair value, respectively. A one-month delay or acceleration in achieving commissioning would result in a corresponding \$2 million decrease or increase in fair value, respectively.

See Note 16 for further information on the conversion of Class B shares.

12. Common Shares

A. Authorized and Outstanding

The Corporation is authorized to issue an unlimited number of common shares without nominal or par value and an unlimited number of preferred shares. The common shares entitle the holders thereof to one vote per share at meetings of shareholders. The preferred shares are issuable in series and have such rights, restrictions, conditions, and limitations as the Board of Directors (the "Board") may from time to time determine. No preferred shares have been issued.

The change in issued and outstanding common shares during the six months ended June 30, 2017 and 2016 are as follows:

	6 months ended June 30			
	2017		2016	
	Common shares (millions)	Amount (millions)	Common shares (millions)	Amount (millions)
Issued and outstanding, beginning of period	224	2,469	191	2,152
Issued to TransAlta	-	-	15	152
Public offering ⁽¹⁾	-	-	18	165
Issued and outstanding, end of period	224	2,469	224	2,469

(1) 2016 is net of issuance costs of \$8 million (\$10 million issuance costs, less tax effects of \$2 million).

B. Dividends

The declaration of dividends on the Corporation's common shares is at the discretion of the Board.

The following table summarizes the common share dividends declared within the six months ended June 30, 2017 and 2016, excluding dividend equivalent payments. See Note 4 of the Corporation's most recent annual consolidated financial statements for more information.

Dividends declared	Total dividends			
	per share	Total dividends	TransAlta	Other shareholders
Period ended June 30, 2017	0.36665	82	49	33
Period ended June 30, 2016	0.44331	101	60	41

On July 28, 2017, the Corporation declared a dividend of \$0.07833 per common share payable on Sept. 29, 2017, Oct. 31, 2017, and Nov. 30, 2017.

C. Diluted Earnings per Share

As at June 30, 2017 the Corporation's potentially dilutive instruments included the 26 million Class B shares, and the \$215 million debenture, which is convertible, at TransAlta's option, into 16 million common shares on the maturity date of the debenture. As at June 30, 2017, and 2016, the conditions related to the potential conversion of Class B shares into the Corporation's common shares had not been met. For the second quarter and year-to-date periods of 2017 and 2016, there is no dilutive effect on earnings per share from the convertible debenture.

13. Commitments and Contingencies

A. Litigation

In the normal course of business, the Corporation may become party to litigation claims. There are currently no known claims that the Corporation has determined as significant enough to require disclosure.

B. Guarantees

As part of the investment in the Australian Assets, the Corporation entered into a Guarantee and Indemnification Agreement in favour of TransAlta related to certain guarantees TransAlta has provided to third parties in respect of certain obligations of TEA (the "TEA Guarantees"). The Corporation has agreed to indemnify TransAlta from and against all claims, actions, proceedings, liabilities, losses, costs, expenses, or damages against or incurred by TransAlta arising out of or in connection with the TEA Guarantees and to reimburse TransAlta in full for the amount of any payment made by TransAlta under and in accordance with the TEA Guarantees, relating to actions, omissions, events, and circumstances that occur. As at June 30, 2017, the total amounts guaranteed by the Corporation were \$939 million (Dec. 31, 2016 - \$925 million).

C. Line Loss Rule Proceeding

TransAlta is participating in a line loss rule proceeding (“LLRP”) that is currently before the Alberta Utilities Commission (“AUC”). The AUC has determined that it has the ability to retroactively adjust line loss rates going back to 2006 and directed the Alberta Electric System Operator (the “AESO”) to, among other things, perform such retroactive calculations. The various decisions by the AUC are, however, subject to appeal and challenge. The Corporation may incur additional transmission charges as a result of the LLRP from 2013 onward. The outcome of the LLRP, however, currently remains uncertain and the total potential exposure faced by TransAlta and the Corporation, if any, cannot be calculated with certainty until retroactive calculations using a Commission-approved methodology are made available, and until the Commission determines what methodology will be used for retroactive calculations. The AESO expects retroactive calculations for each year using a Commission-approved methodology to begin to be available later in 2017. As a result, no provision has been recorded at this time.

D. Commitments

As at June 30, 2017, the remaining costs under the South Hedland contribution agreement are estimated to be approximately \$202 million (AUD\$209 million). Refer to Note 4 of the Corporation’s most recent annual consolidated financial statements for additional information on the contribution agreement.

14. Related Party Transactions and Balances

The Corporation has entered into certain agreements and transactions with TransAlta which are discussed in more detail in Note 25 of the Corporation’s most recent annual consolidated financial statements.

A. Related Party Transactions

Related party transactions include the finance income related to subsidiaries of TransAlta (Note 4). Also, all financial instruments and derivatives that relate to the Corporation are entered into on behalf of the Corporation by a subsidiary of TransAlta.

Certain subsidiaries of TransAlta provide asset management and optimization services and procure gas for the Corporation’s Sarnia cogeneration plant. The Sarnia cogeneration plant is charged a fixed fee of approximately \$0.125 million per quarter, plus a variable fee of 1.6 per cent of its gross margin.

Related party transactions that are not otherwise presented elsewhere consist of the following:

	3 months ended June 30		6 months ended June 30	
	2017	2016	2017	2016
Revenue from TransAlta PPAs	9	8	19	20
G&A Reimbursement Fee ⁽¹⁾	5	4	9	8
Interest expense	4	3	6	6
Asset optimization fee	-	-	1	-
Realized foreign exchange gain on hedge on contribution commitment	-	-	1	-

(1) Includes portion charged directly to the Wyoming wind farm.

All these transactions are with TransAlta or subsidiaries of TransAlta.

B. Related Party Balances

Related party balances include the investments in subsidiaries of TransAlta disclosed in Note 4, the risk management assets and liabilities disclosed in Note 7, the credit facility and Canadian Asset working capital loan disclosed in Note 9, the convertible debenture disclosed in Note 10, the Class B shares liability disclosed in Note 11, and the guarantees provided by the Corporation on behalf of TransAlta and TEA disclosed in Note 13.

Related party balances that are not otherwise presented elsewhere consist of the following:

As at	June 30, 2017	Dec. 31, 2016
Trade and other receivables	15	36
Accounts payable and accrued liabilities (including interest payable)	6	11
Dividends payable	20	29
Letters of credit issued by TransAlta on behalf of the Corporation	59	60
Guarantees provided by TransAlta on behalf of the Corporation	108	58

All these balances are with TransAlta or subsidiaries of TransAlta.

16. Subsequent Events

Syndicated Credit Facility

On July 24, 2017, the Corporation entered into a syndicated credit agreement giving the Corporation access to \$500 million in direct borrowings or letters of credit. The agreement is fully committed for four years, expiring in 2021. The facility is subject to a number of customary covenants and restrictions in order to maintain access to the funding commitments. In conjunction with the new credit agreement, the existing \$350 million credit facility currently provided by TransAlta was cancelled.

South Hedland Facility and Conversion of Class B Shares

On July 28, 2017, commissioning of the South Hedland Facility was achieved and on Aug. 1 2017, the Corporation converted the 26.1 million Class B Shares into 26.4 million common shares. The Class B shares were converted at a ratio greater than 1:1 because the construction and commissioning costs for the project were below the referenced costs agreed upon in the amended contribution agreement, as filed on SEDAR, between the Corporation and TransAlta. On the conversion date, the carrying amount of the Class B shares liability will be derecognized and the common shares issued on conversion will be recognized at that same amount. As a result, current liabilities will decrease and equity attributable to shareholders will increase.

On Aug. 1, 2017, Fortescue Metals Group Ltd. ("FMG") notified TransAlta that in its view the South Hedland Facility has not yet satisfied the requisite performance criteria under the South Hedland power purchase agreement ("the "PPA") between FMG and TransAlta. In the Corporation's view, all conditions to establish commercial operations have been fully satisfied under the terms of the PPA with FMG.

Termination of Solomon PPA

On Aug. 1, 2017, the Corporation received notice that FMG intends to repurchase the Solomon Power Station from TEC Pipe Pty Ltd., a wholly-owned subsidiary of TransAlta, for approximately US\$335 million. The Corporation has an economic interest in the cash flows from the Solomon Power Station. FMG is expected to complete its acquisition of the Solomon Power Station in November 2017. The Corporation will utilize the proceeds in part to repay the credit facility used to fund the development of the South Hedland Facility, for other growth opportunities, and for general corporate purposes.

Glossary of Key Terms

Australian Assets - TransAlta's 425 MW Australian gas-fired generation assets that are fully operational and contracted under long-term contracts, the 150 MW South Hedland Facility as well as the 270-kilometre Fortescue River Gas pipeline.

Australian Tracking Preferred Shares - preferred shares of a TransAlta subsidiary, which provide cumulative variable dividends broadly equal to the underlying net distributable profits of TEA.

Canadian Assets - 506 MW Sarnia cogeneration plant, 98 MW Le Nordais wind farm, and 7 MW Ragged Chute hydro facility that are fully operational and contracted under long-term contracts. The assets are located in Ontario and Quebec.

Capacity - the rated continuous load-carrying ability, expressed in Megawatts, of generation equipment.

Credit Facility - a \$350 million unsecured credit facility with TransAlta, which was cancelled on July 24, 2017. The facility was available to the Corporation for general corporate purposes, including financing ongoing working capital requirements.

Gigawatt - a measure of electric power equal to 1,000 Megawatts.

GWh - means Gigawatt hour which is a measure of electricity consumption equivalent to the use of 1,000 Megawatts of power over a period of one hour.

Greenhouse Gases (GHG) - gases having potential to retain heat in the atmosphere, including water vapour, carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, and perfluorocarbons.

Megawatt (MW) - a measure of electric power equal to 1,000,000 watts.

MWh - means Megawatt hour which is a measure of electricity consumption equivalent to the use of 1,000,000 watts of power over a period of one hour.

MRPS - Australian Mandatory Redeemable Preferred Shares are non-voting and rank subordinate to all present and future secured and unsecured indebtedness, but are senior to all other classes of issued and outstanding shares in the capital of the Australian subsidiary.

Net Maximum Capacity - the maximum Capacity or effective rating, modified for ambient limitations, that a generating unit or power plant can sustain over a specific period, less the Capacity used to supply the demand of station service or auxiliary needs.

PPA - a power purchase and sale agreement between a power generator and a third-party acquirer of electricity.

South Hedland or South Hedland Facility - 150 MW combined-cycle gas power station in South Hedland, Western Australia

TEA - TransAlta Energy (Australia) Pty Ltd, an Australian subsidiary of TransAlta.

TransAlta PPAs - PPAs between TransAlta and the Corporation providing for the purchase by TransAlta, for a fixed price, of all the power produced by certain wind and hydro facilities. The initial price payable in 2013 by TransAlta for output was \$30.00/MWh for wind facilities and \$45.00/MWh for hydro facilities, and these amounts are adjusted annually for changes in the Consumer Price Index.

Unplanned Outage - the shutdown of a generating unit due to an unanticipated breakdown.

Wyoming Wind Farm - TransAlta's 144 MW wind farm in Wyoming.
